***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 5, 14-19, are rejected under 35 U.S.C. 101 because the claim is directed to a recording medium storing nonfunctional descriptive material.

Data structures not claimed as embodied in computer-readable media are descriptive material per se and are not statutory because they are neither physical "things" nor statutory processes. See, e.g. Warmerdam, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory) and merely claiming nonfunctional descriptive material stored in a computer-readable medium does not make it statutory. See MPEP 2106.IV.B.1.

3. Claims 1-4, 6-13, 20-46, contain allowable subject matter over the prior art of record.

4. The following is a statement of reasons for the indication of allowable subject matter:

The claimed invention is directed to an MPEG picture data recording apparatus. The independent claims identify the feature of "recording onto a recording medium VBV buffer occupation value relevant information that shows an information value relating to a VBV buffer occupation value at an MPEG encoding starting point in time or an end point in time of a last picture in each predetermined section of the MPEG picture data, and address information that shows a position of the VBV buffer occupation value relevant information in the MPEG picture data". The closest prior art, Sugahara et al

(U.S. P.No. 6,888,967) discloses a conventional encoding apparatus including VBV buffer, either singularly or in combination fails to anticipate or render the above underlined limitations obvious.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Sugahara et al (U.S. P.No. 6,888,967) discloses a conventional encoding apparatus including VBV buffer.
